iOS Human Interface Guidelines

- <https://developer.apple.com/ios/human-interface-guidelines/>
- An guidelines for app designers.
But engineers should read this too.

iOS Human Interface Guidelines

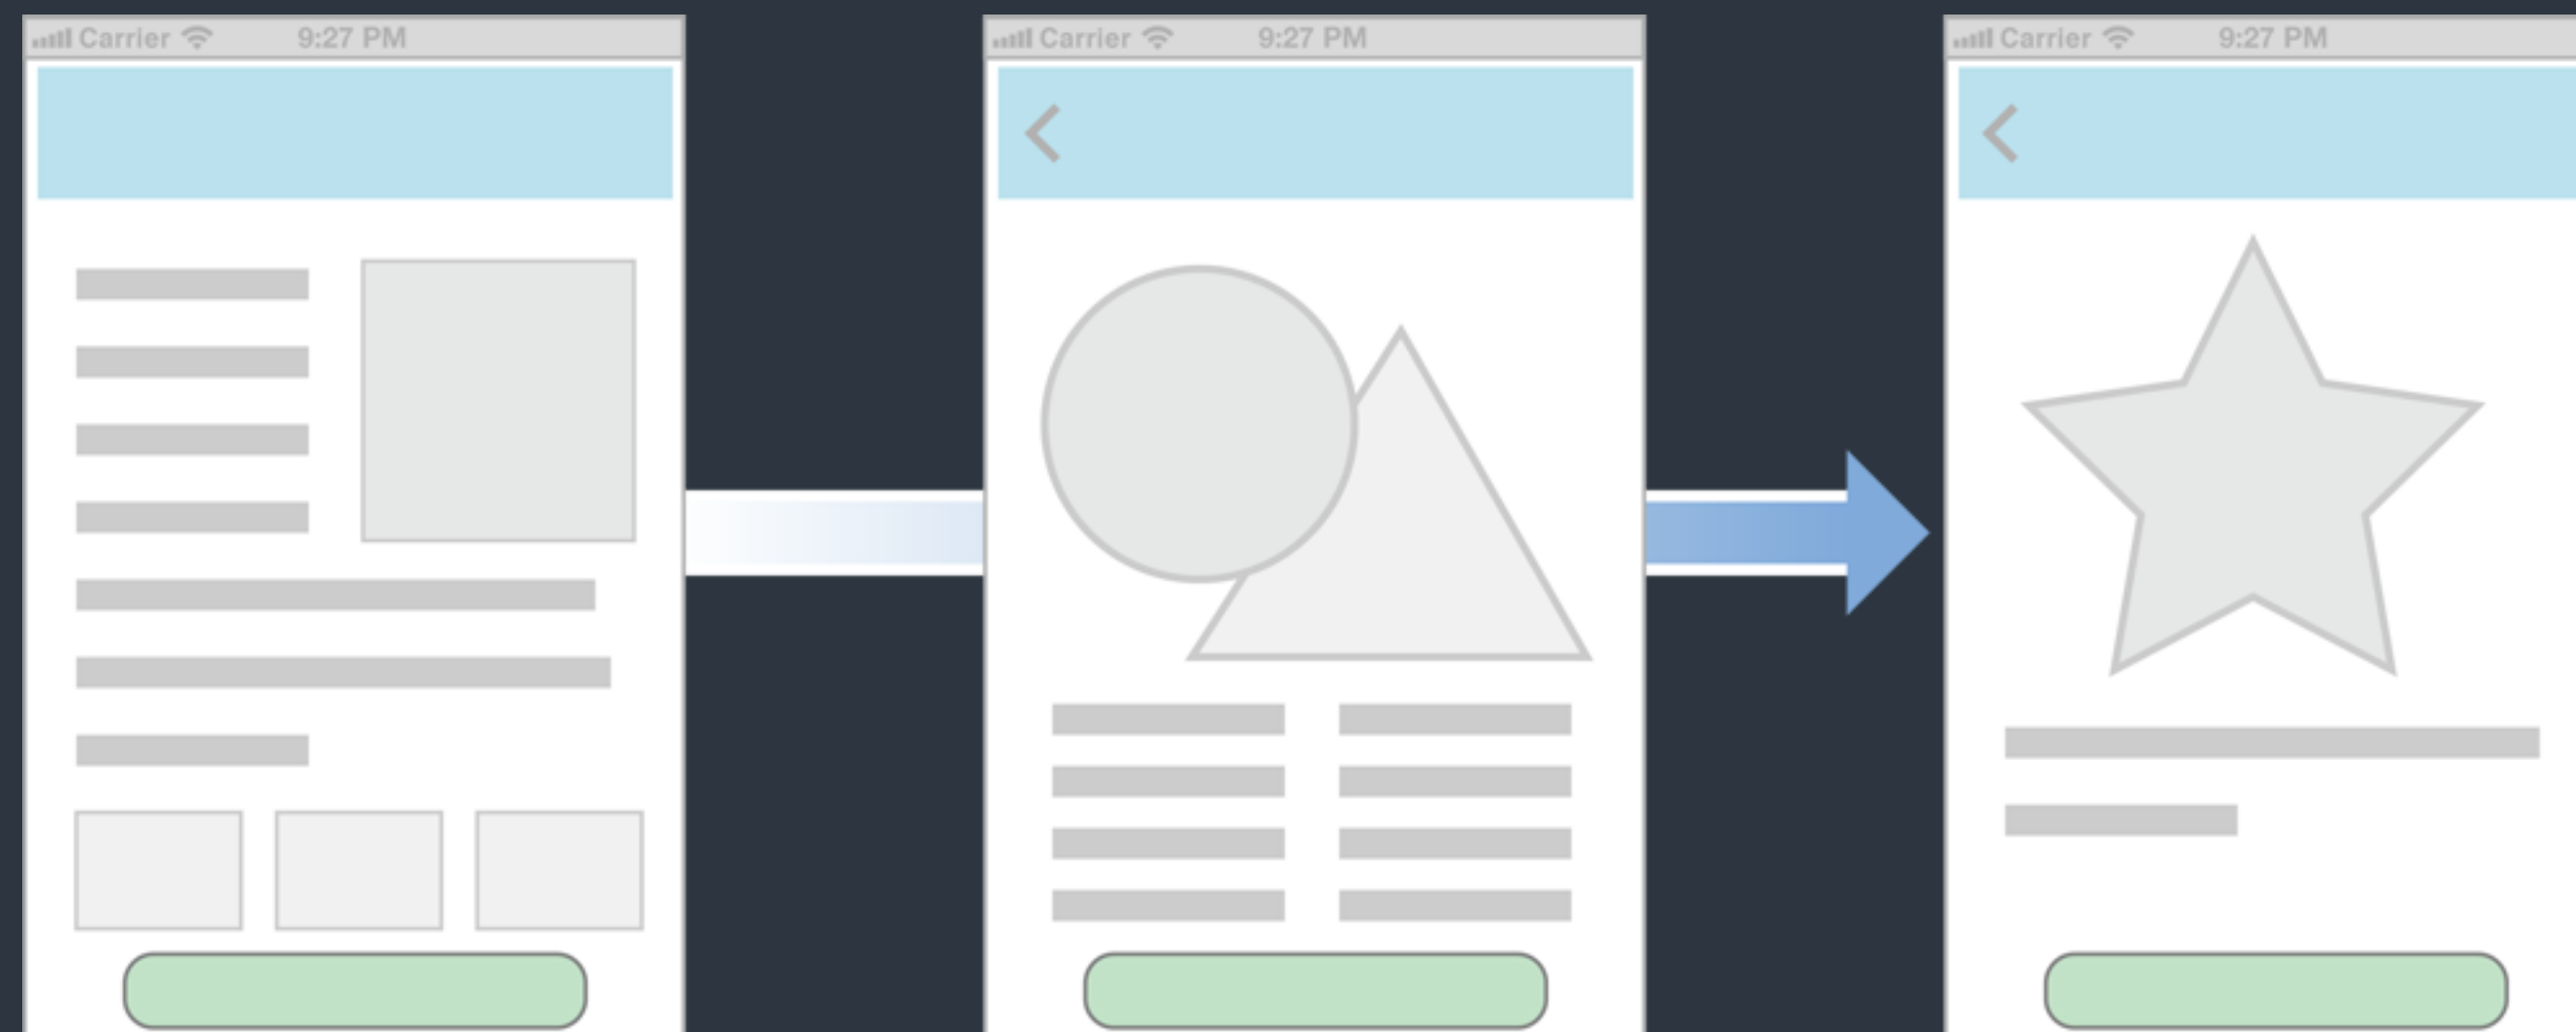

- Clarity
- Deference
- Depth
- Aesthetic Integrity
- Consistency
- Direct Manipulation
- Feedback
- Metaphors
- User Control

Aesthetic Integrity

Consistency

- Consistency lets people transfer their knowledge and skills from one part of an app's UI to another and from one app to another app.

Direct Manipulation & Feedback

Interface Essentials

- The interface elements provided by UIKit fit into three main categories:
 - **Bars**
Tell people where they are in your app, provide navigation, and may contain buttons or other elements for initiating actions and communicating information.
 - **Views**
Contain the primary content people see in your app, such as text, graphics, animations, and interactive elements. Views can enable behaviors such as scrolling, insertion, deletion, and arrangement.
 - **Controls**
Initiate actions and convey information. Buttons, switches, text fields, and progress indicators are examples of controls.

Controls

- Button
- Label
- Text Field
- Slider
- Switch
- Stepper
- Segmented Control
- Page Control
- Refresh control
- Progress Indicator
- Edit Menu

Views

- Image View
- Text View
- Web View
- Map View
- Alert
- Action Sheet
- Activity View
- Popover
- Scroll View
- Table View
- Collection View
- Split View

Bars

- Navigation Bar
- Tab Bar
- Toolbar
- Status Bar
- Search Bar

Interaction

- First Launch & Empty State
- Navigation
- **Modality** - *creates focus by preventing people from doing other things until they complete a task or dismiss a message or view.*
- Gestures
- 3D Touch
- Data Entry
- Feedback
- Undo/Redo
- Requesting Permission
- Authentication
- Settings

Misc

- Launch Screen (*Graphics*)
- Notification (*Features*)
- iCloud (*Technologies*)

Controls

Label

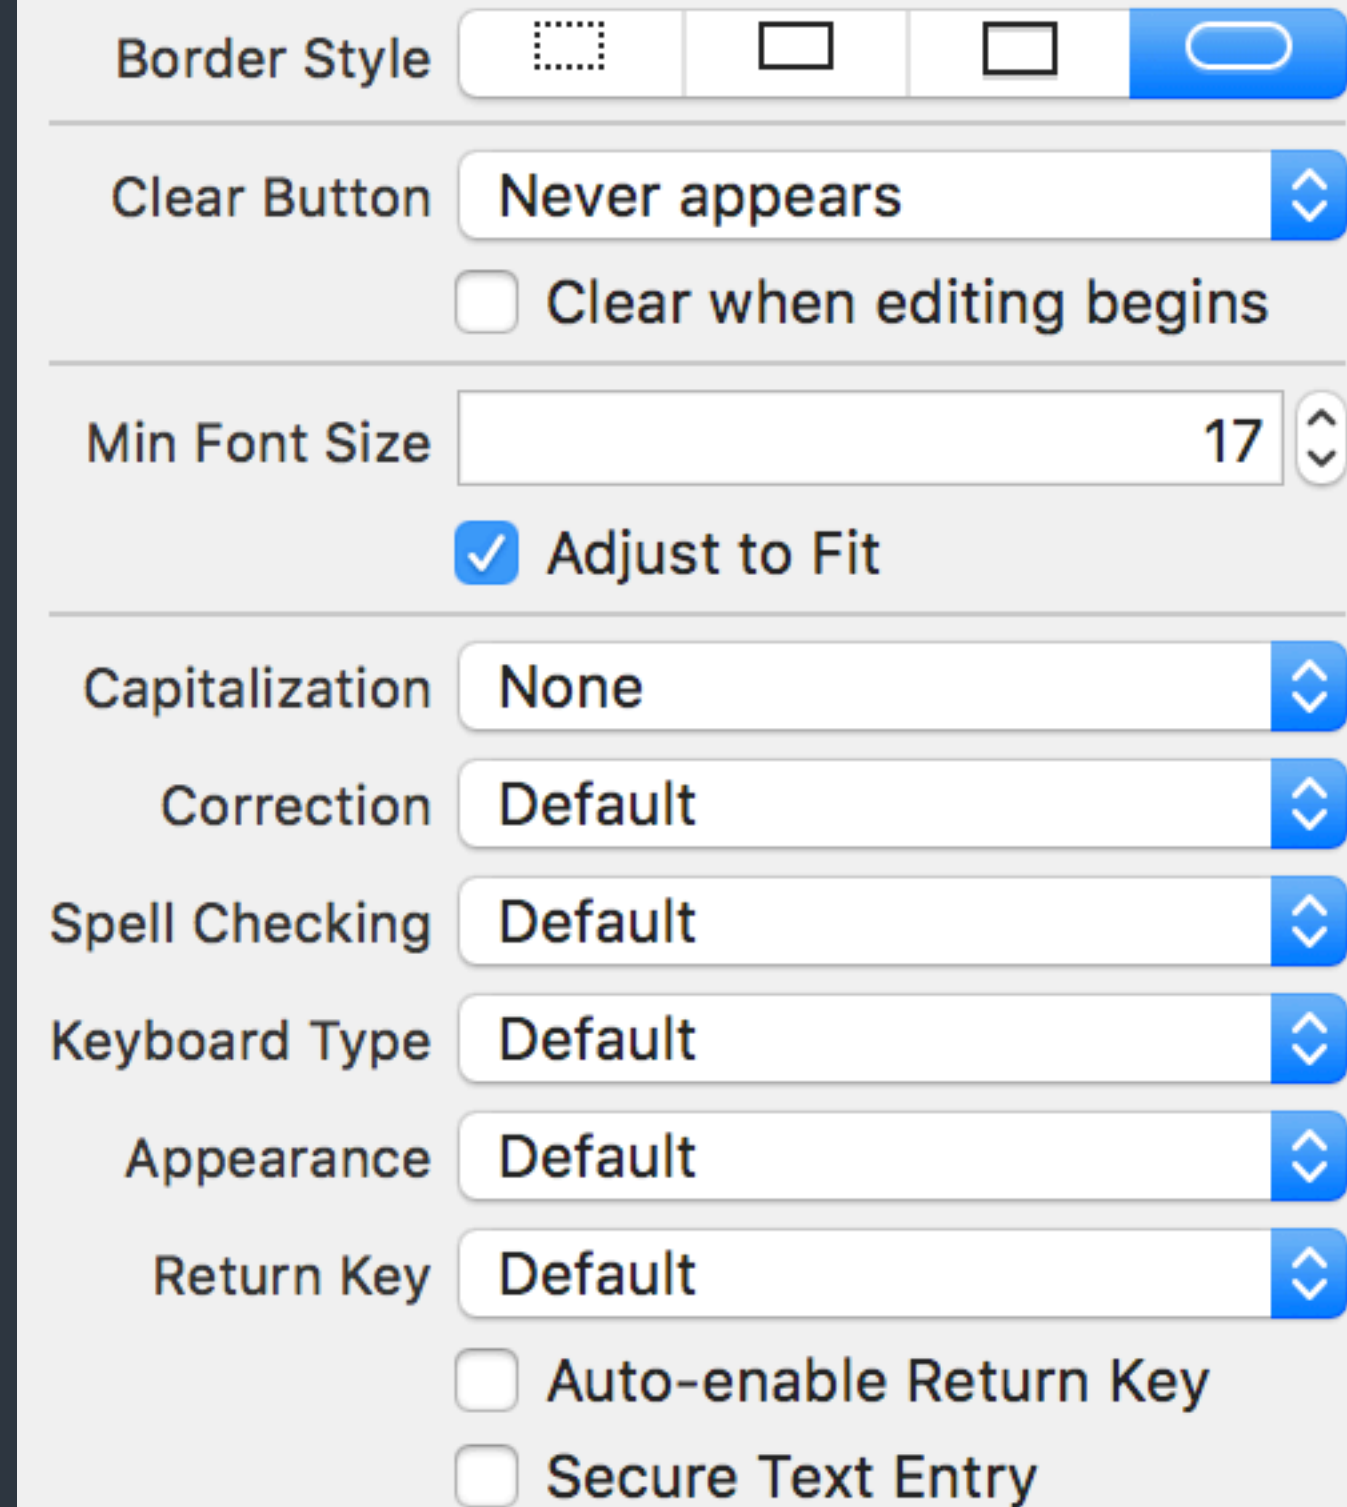

- You can use `UIColor` and `UIFont` to change the style of all text in a label. Use `NSAttributedString` to change the styling of part of the text.
- Change the `numberOfLines` property to decide how many lines a label can show. Also you can set `minimumScaleFactor` for showing more texts.

Text Field

- A text field can contain **placeholder** text to show a hint in a text field to help communicate purpose.

- Choose appropriate keyboard to help user input.

You can use **inputAccessoryView** to provide an extra toolbar above the keyboard, and even use **inputView** to provide custom keyboard rather than using systems's one.

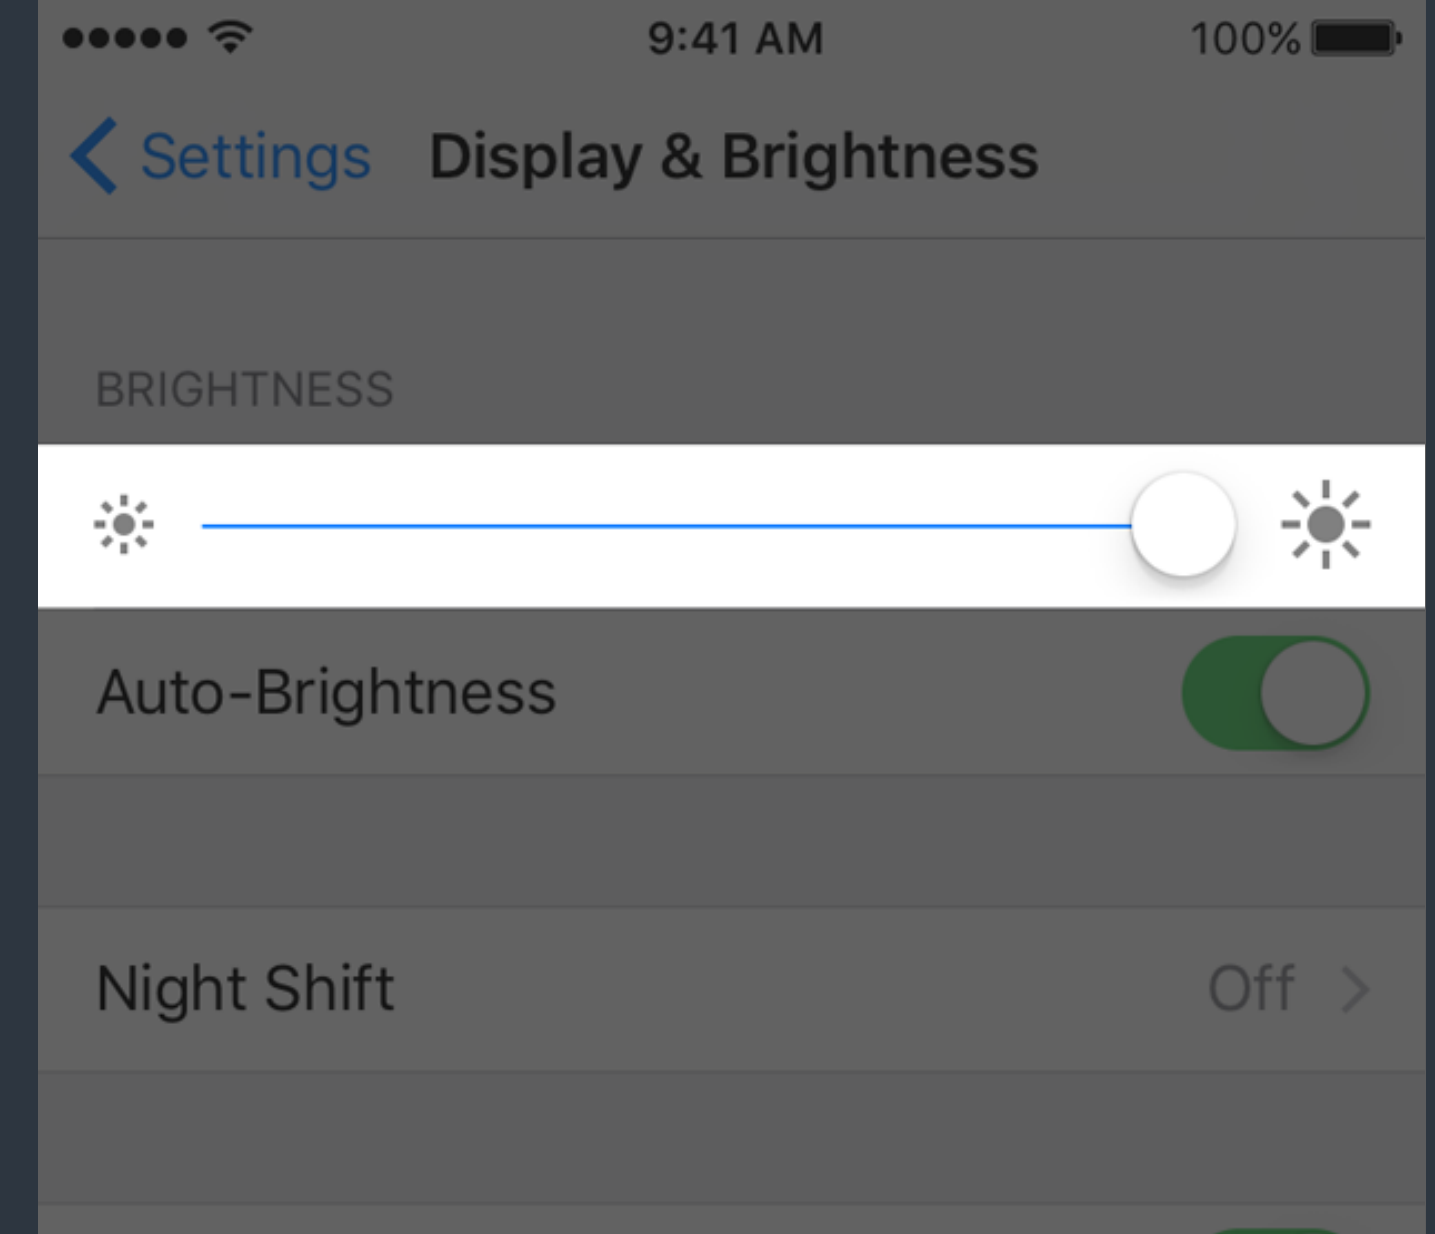

The image shows the 'Text Field' settings panel in Xcode. It includes options for Border Style (dashed, rounded, or pill-shaped), Clear Button (Never appears, or Clear when editing begins), Min Font Size (17), Adjust to Fit (checked), Capitalization (None), Correction (Default), Spell Checking (Default), Keyboard Type (Default), Appearance (Default), Return Key (Default), Auto-enable Return Key, and Secure Text Entry.

Border Style	  
Clear Button	Never appears  <input type="checkbox"/> Clear when editing begins
Min Font Size	17 
	<input checked="" type="checkbox"/> Adjust to Fit
Capitalization	None 
Correction	Default 
Spell Checking	Default 
Keyboard Type	Default 
Appearance	Default 
Return Key	Default  <input type="checkbox"/> Auto-enable Return Key <input type="checkbox"/> Secure Text Entry

Slider

- Track `UIControlEvents.valueChanged` event to get the latest value of the control.

Switch

- Switches are *intended for use in tables*, such as in a list of settings that can be toggled on and off.
If you need similar functionality in a toolbar or navigation bar, use a button instead.
- Track `UIControlEvents.valueChanged` event to get the latest on/off status of the switch.

Views

Image View

- An image view displays a single image or an animated sequence of images over a transparent or opaque background. The implementation class is **UIImageView**.
- Set **contentMode** property to decide how an image view shows larger picture than the view itself.
- Set **clipsToBounds** property when necessary.

Image View

- Performance tips:
 - Cache scaled versions of frequently used images.
 - Use images whose size is close to the size of the image view.
 - Make your image view **opaque** whenever possible.
- Use **xcasset** file to save images and make *resizable images*.

Web View

- A web view works like an embedded browser in your app. The implementation class is **UIWebView** and **WKWebView**.
The later one is newer and faster.
- Use **SFSafariViewController** for showing web links within your app. It contains a toolbar which provides browser features.
- Web view is suitable for rendering rich-format contents.
The performance of using NSAttributedString is better, but also harder to configure.

Scroll View

- The Photos app embeds an image view in a scroll view to show **scaled pictures**.
- Use the **contentSize** property to determine the size of the content to be scrolled.

Table View & Collection View

- To improve the performance, cells should be **reused**.
- Feed the table view with your data source.
- Storyboards provide a **static mode** for table views to show fixed data, like the settings page.
- Collection View is more generic than table view. It provides **custom layout** capability for cells.

Bars

Tab Bar

- A tab bar is used to organize features at app level.
Segmented controls are usually used to provide different views of the same data/task.

Interaction

First Launch & Empty State

- A change to let user understand how your app works.
- Ref: <http://emptystat.es>
- The launch screen is quickly replaced with the first screen of your app, giving the impression that your app is fast and responsive.

- **Interactions**

Accessibility, Audio, and Terminology.

- **Features**

Multi-tasking (iPad), and Siri.

- **Visual Design**

Animation, branding, color, layout, and typography.

- **Extensions**

Custom Keyboards, Document Providers, Home Screen Quick Actions, Messaging, Photo Editing, Sharing, and Widgets.

- **Technologies**

Apply Pay and Wallet, GameKit, HealthKit, HomeKit, In-App Purchase, and ResearchKit.

- **Graphics**

Sections about icons and graphic elements in your app.

- **Resources**

Templates of icons and other materials.

- There are also human interface design guidelines for macOS, tvOS and watchOS.
- You can also reference Android's design guidelines to see the difference between these 2 platforms.

Proximity

Proximity

Panel of elevator

Proximity

What's the direction of the coming elevator?

Proximity

Proximity

- Proximity creates related meaning
Elements that are related should be grouped together, whereas separate design elements should have enough space in between to communicate they are different.

Proximity

1. Loomings

Call me Ishmael. Some years ago—never mind how long precisely—having little or no money in my purse, and nothing particular to interest me on shore, I thought I would sail about a little and see the watery part of the world. It is a way I have of driving off the spleen and regulating the circulation. Whenever I find myself growing grim about the mouth; whenever it is a damp, drizzly November in my soul; whenever I find myself involuntarily pausing before coffin warehouses, and bringing up the rear of every funeral I meet; and especially whenever my hypos get such an upper hand of me, that it requires a strong moral principle to prevent me from deliberately

Herman Melville

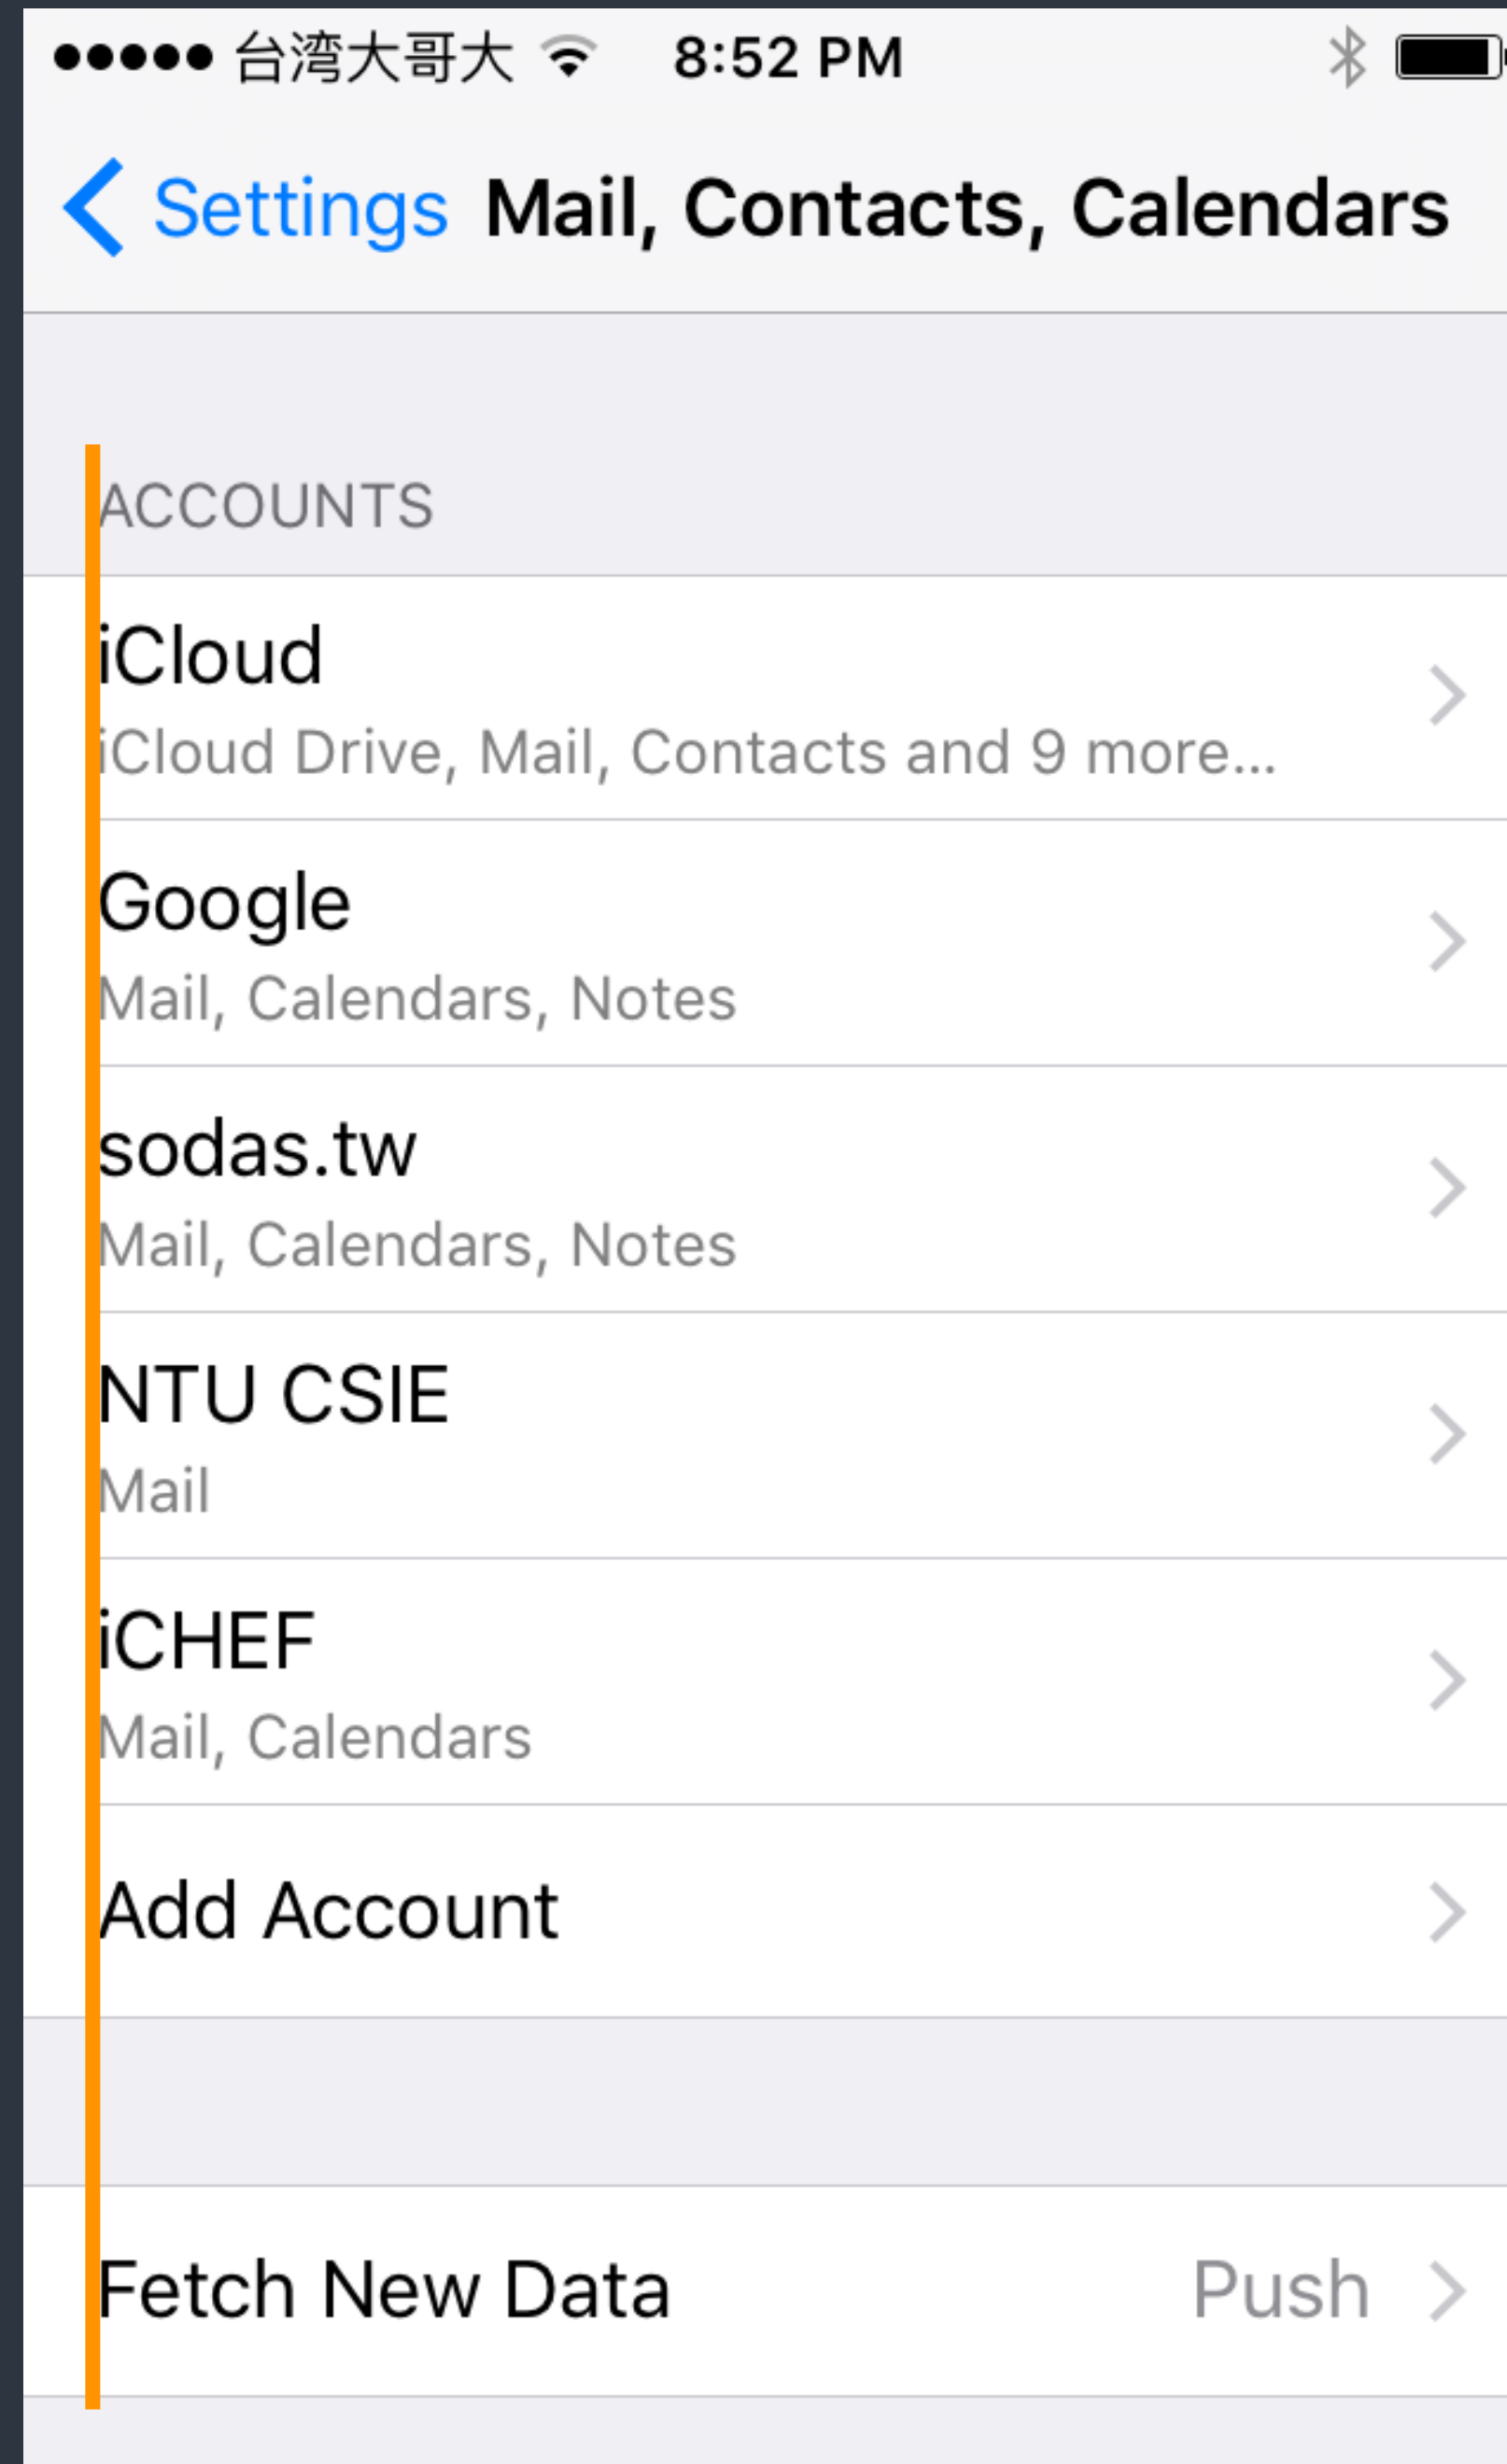

is washed by waves, and cooled by breezes, which a few hours previous were out of sight of land. Look at the crowds of water-gazers there.

Circumambulate the city of a dreamy Sabbath afternoon. Go from Corlears Hook to Coenties Slip, and from thence, by Whitehall, northward. What do you see?—Posted like silent sentinels all around the town, stand thousands upon thousands of mortal men fixed in ocean reveries. Some leaning against the spiles; some seated upon the pier-heads; some looking over the bulwarks of ships from China; some high aloft in the rigging, as if striving to get a still better

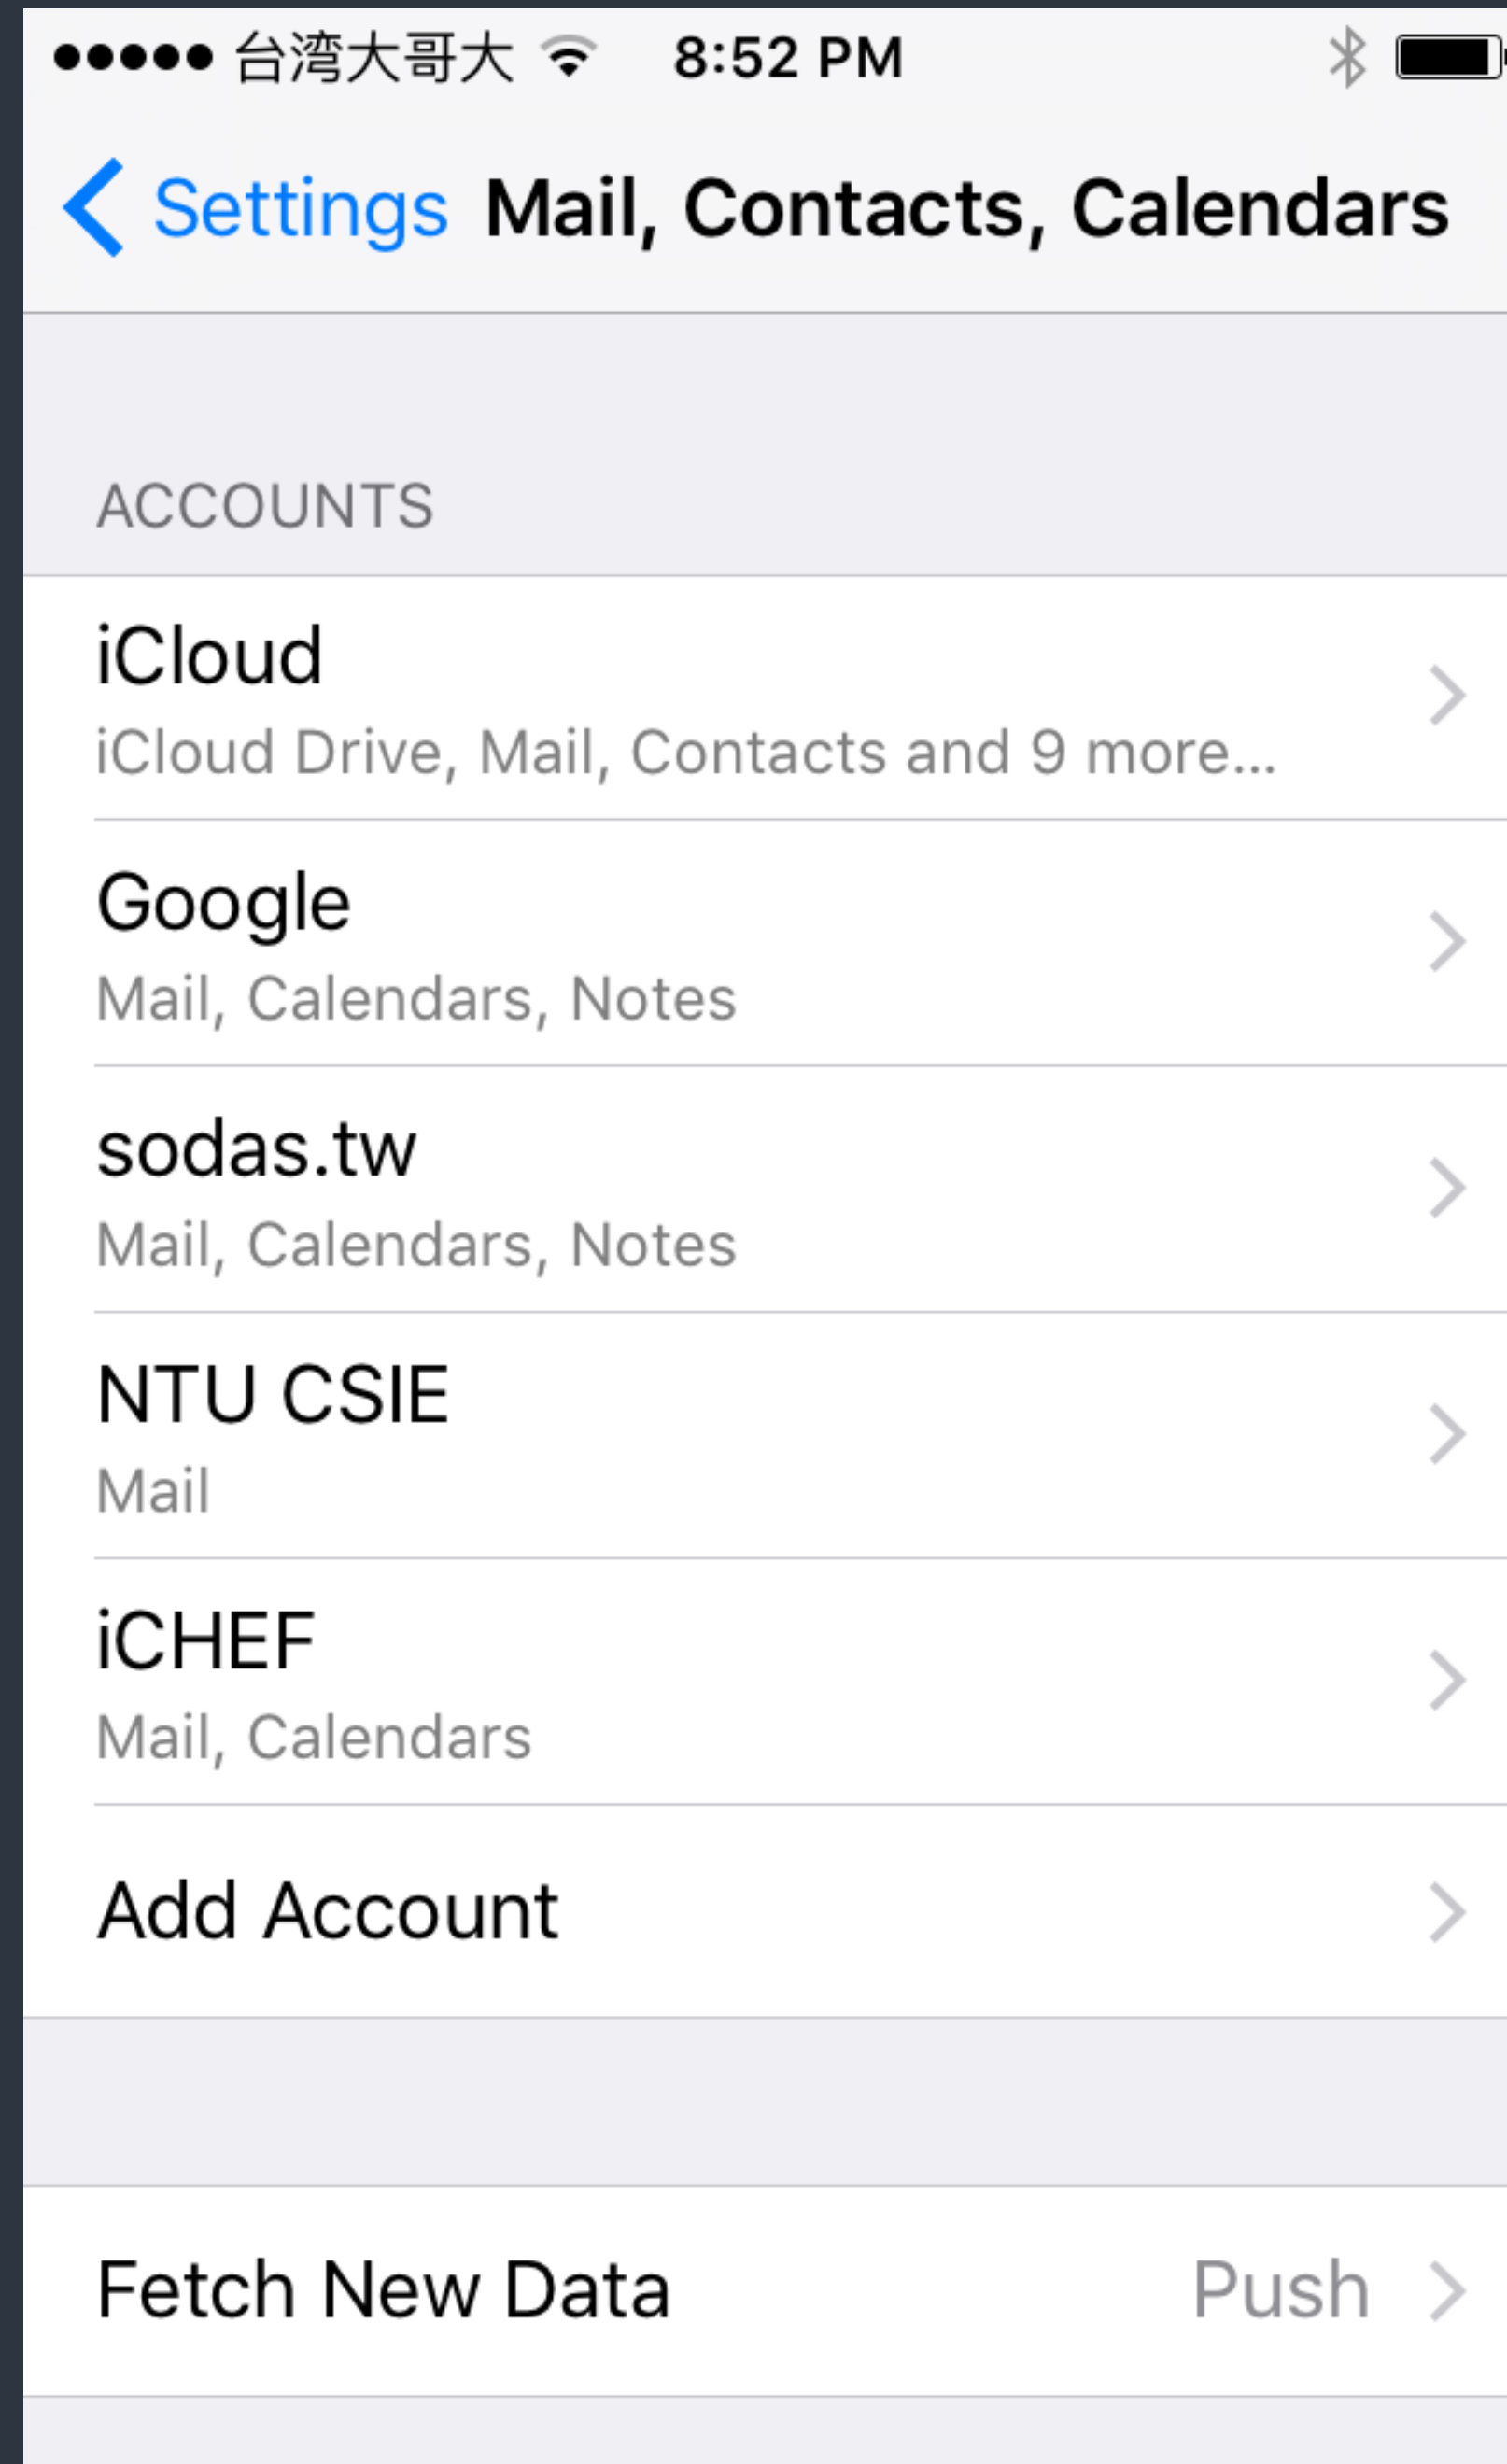

will content them but the extremest limit of the land; loitering under the shady lee of yonder warehouses will not suffice. No. They must get just as nigh the water as they possibly can without falling in. And there they stand—miles of them—leagues. Inlanders all, they come from lanes and alleys, streets and avenues—north, east, south, and west. Yet here they all unite. Tell me, does the magnetic virtue of the needles of the compasses of all those ships attract them thither?

Once more. Say you are in the country; in some high land of lakes. Take almost any path you please, and ten to one it
